Bohdan Sydorenko

Senior QA Engineer / Full-Stack Testing

I keep releases green — practical automation and risk-based testing that catch the defects that matter before they reach production.

SUMMARY

Quality is a habit, not a phase.

Senior QA Engineer with 10+ years in web, API, mobile, and embedded testing. I pair hands-on manual testing with automation in Playwright, TypeScript, Python, and CI/CD workflows — and I increasingly lean on AI-assisted testing to move faster.

I focus on outcomes: stronger regression coverage, earlier defect detection, and faster feedback between QA, development, and DevOps.

SKILLS

What I test, and how deep.

Technical Skills

TypeScript, JavaScript, Playwright, Appium, Python, Postman, Jenkins, Docker, AWS / GCP / Azure

Testing Areas

UI Testing ADVANCED

E2E, regression, and exploratory testing of key user flows with Playwright.

API Testing ADVANCED

REST validation, negative scenarios, and contract checks with Postman and JS/TS tools.

Mobile Testing STRONG

Appium automation, device-matrix coverage, and stability checks before release.

Embedded Testing STRONG

Hardware-integrated QA for automotive and smart-device products, including protocol-level checks.

CI/CD Quality Gates STRONG

Automated runs in CI/CD pipelines with clear quality gates and fast feedback.

Mentoring & Collaboration STRONG

Mentoring junior QA engineers and improving team workflows through shared practices.

AI-Assisted Testing 2026 FOCUS

I use **Claude Code** and AI workflows day-to-day in QA: scaffolding Playwright specs from requirements, drafting edge-case and negative scenarios, triaging failures and logs, and speeding up test maintenance. Faster coverage, less boilerplate — humans stay in the loop on risk.

Claude Code, AI test generation, Prompt-assisted debugging, Log & failure triage

EXPERIENCE

Senior QA Engineer (Full-Stack Testing)

International Multi-platform Solutions (name on request) · May 2021 – Present

QA across web, mobile, and embedded projects with an automation-first approach.

- Built and maintained E2E and regression automation with TypeScript/JavaScript and Playwright.
- Integrated automated suites into CI/CD pipelines to support stable, repeatable releases.
- Ran API validation with Postman and JS/TS; supported hardware testing when needed.
- Adopted AI-assisted testing (Claude Code) to accelerate test authoring and failure triage.
- Analyzed defects, identified root causes, and mentored junior QA engineers.

QA Engineer (Manual + Automation)

Ring · Aug 2020 – Apr 2021

QA for indoor and outdoor smart-home security and automation products.

- Performed manual and automated testing for functional, exploratory, and performance scenarios.
- Validated product behavior in field conditions and documented defects for engineering teams.
- Prepared and configured hardware test environments for repeatable execution.
- Reported quality status and release risks to stakeholders.

Test Engineer

Intellias · Jul 2017 – Aug 2020

QA for a next-generation automotive navigation platform.

- Executed manual, exploratory, and performance testing across lab and in-car environments.
- Prepared test environments and hardware configurations for market-specific validation.
- Maintained test documentation and clear bug reports for development teams.
- Worked with cross-functional teams to align quality priorities and fixes.

QA Engineer

Luxoft · May 2013 – Jul 2017

Manual QA for embedded set-top-box solutions in satellite and cable TV domains.

- Performed manual regression and sanity testing for embedded product releases.
- Analyzed requirements and ensured test coverage against functional expectations.
- Managed the defect lifecycle and coordinated fixes with engineering teams.
- Set up and maintained test environments for repeatable validation.

CONTACT

Open to Senior QA and Full-Stack Testing roles. Full CV / resume available on request.
